NEIGHBORS ONLY PREVIEW · BRENTWOOD

How the drink ticket works

Nov 4 to Nov 15, 2026
Windows 4 to 5, 5 to 6, 7 to 8, 8 to 9 PM
One party per window · First drink and meal on us

1 · THE GUEST

1. **Gets a personal link** from the backend (one per guest, do not reuse). Opening it shows "Hey, Kelly!" and their drink ticket.
2. **Picks a day and time.** Taps the orange button, chooses a day and an hour window, enters an email, taps Lock it in. The ticket itself now shows the date and time. A confirmation email goes out.
3. **Can add one guest** by first name. The same link covers both of them; they share it.
4. **On the day** the ticket shows an "I'm here" button. They tap it when they walk in and hand you the phone.

They can move the visit any time before it's redeemed (Change on the ticket). A missed day asks them to pick a new time.

2 · THE BARTENDER

1. Guest taps **I'm here**; the ticket flips to "Coming right up".
2. Tap **Bartender: redeem**, enter the **team PIN** (ask your manager), set the number of drinks poured, tick the ID check (21+, valid government ID, both guests if there's a plus one).
3. Tap **Redeem**. The ticket turns back over and takes the stamp. A ticket redeems once.

HOUSE RULES

One drink per neighbor on the house, and their meal. Plus ones are on the ticket under the guest's name. No ticket, no visit; walk-ins are not part of the preview.

3 · THE HOST BACKEND

EXCLUSIVEPREVIEW.VERCEL.APP/ADMIN.HTML
password from your manager

- **New invite:** type a first name, copy the link, text it to the guest. Add several at once, one name per line.
- **Preview days board:** every day and window with who is in it, +1 if they're bringing someone, a check once redeemed.
- **Each invite** shows visit, plus one, email, opened, here, redeemed. Filters: Booked, Not opened, Here, Redeemed. Export CSV.
- **Clear visit** frees a window if a guest can't make it; they pick again on their ticket.

WHAT HELD MEANS

Held windows are **not guests**. We keep the picker from looking wide open: guests can book about five days ahead (rolls forward daily) and a few off-peak windows are held. Never tell a guest a held window is taken by someone. When we fill up, two settings in Vercel release everything (`VISIT_HOLDS=off`, `VISIT_OPEN_DAYS=0`).

4 · WHERE VISITS SHOW UP

- **Marketing Hub calendar**, under Influencer, as a confirmed visit ("Bar Preview: Kelly and Sam"), plus the timeline and the iCal feed.
- **Shared Google Calendar** (Neighborly, Events & Influencer), within the hour.
- **Guest's inbox:** confirmation on booking and again if they move it.

Hub entries are read-only; change a visit from the backend or let the guest change it on their ticket.
